

IBM Storage made simple for hybrid cloud

Hybrid cloud momentum

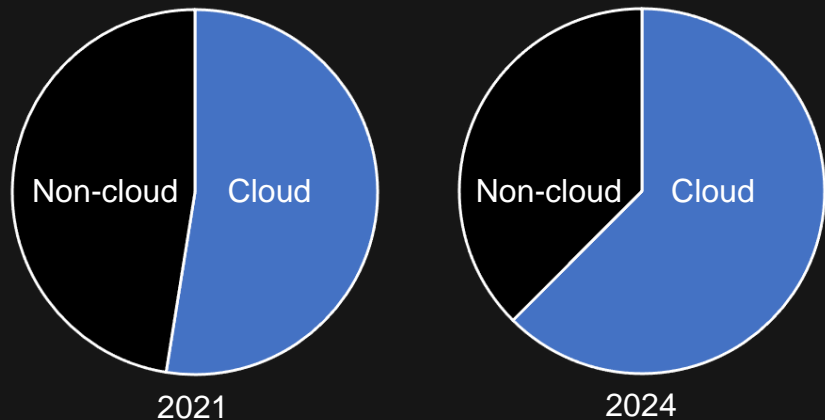

60%

Organizations in 2022 that will have invested in automation and orchestration of cloud-native apps

90%

New applications in 2025 that are cloud-native

IT market – Cloud vs Non-cloud

Hybrid cloud acceleration with the events of 2020

“...flight to safety...”

“...position to withstand the downturn...”

Build once, deploy anywhere

A brief history

c. 1991

c. 1995

vmware

c. 1998

cri-o

kubernetes

c. 2014

Today

Red Hat

OpenShift Container Platform

On-premises

IBM Z
IBM **LinuxONE**
IBM **Power Systems**
x86

AWS
Microsoft Azure
IBM Cloud
Google Cloud

Hybrid cloud has unique needs from storage infrastructure

Data Resilience

Detect threats before
disruption

Quickly recover if
needed on premises or
in the cloud

Data Ops

Consistent efficiency
on-premises and
across clouds

Pervasive AI/ML,
automation, and
self-service

Enterprise Transformation

Bare metal, virtual, containerized

Consistent experience for applications-on-the-move
across on-premises and multiple clouds

vmware®

IBM

Microsoft Azure

aws

Red Hat
OpenShift

Warning potential slow down ahead

Hybrid cloud

You choose the best-of-breed technologies, reduce cost, and avoid vendor lock-ins

36%

cloud customers who think they won't achieve meaningful interoperability between their clouds in two years

Avoid the silos

of workloads and data, thus recreating the problems of legacy data centers

**Modernize
the storage you
already have**

**Simplify your
journey to
hybrid cloud**

Think of storage as a software foundation

Agility

Move data
without
disruption among
storage systems

Bridge

From traditional
to new
technologies like
Containers and
Kubernetes

Cloud

Adopt storage
capabilities
that can be
deployed
across hybrid
cloud

Data reduction

Store more
data on the
storage you
already own

Encryption

Improve data
resiliency by
encrypting
data at rest

Think of storage...

as helping developers
build once and
deploy anywhere

CONTAINER
STORAGE
INTERFACE

CSI for Kubernetes

A portable way for
containerized
applications to
consume storage

Provision

storage on the
developer's terms –
“I need fast
block storage”

Move

containers while
bringing storage
through the transition

Think of storage...

as simplifying operations

29.3%

of enterprises of all sizes
experience a downtime cost
per hour greater than **\$25K**

For storage,

it is increasingly important that cloud-based
predictive analytics platforms offer extensive
monitoring across the stack

Consistent APIs,
procedures, and
orchestration extended
across all your block
storage regardless of
your choice in vendors

SaaS

keeps your monitoring
infrastructure running

AI

improves proactive
management and
problem resolution

Think of storage as improving data resilience

2-site and 3-site replication

Short RTO

On-prem, on cloud
or hybrid

High-availability

Zero RTO

100% data
availability guarantee

Enhanced high-availability

Zero RTO

Multi-Platform
Support

Pure HPE IBM
Dell/EMC NetApp 500+ others...

Immutable copy

Air-gap

Encryption

FIPS 140-2

Decision point

Modernize and stop

bank the savings and be proud of your progress

Innovate

for your hybrid cloud future

Choices when modernizing storage can impact your hybrid cloud future

Consistent APIs

and operations across
on-premises and cloud

Latest physical infrastructure

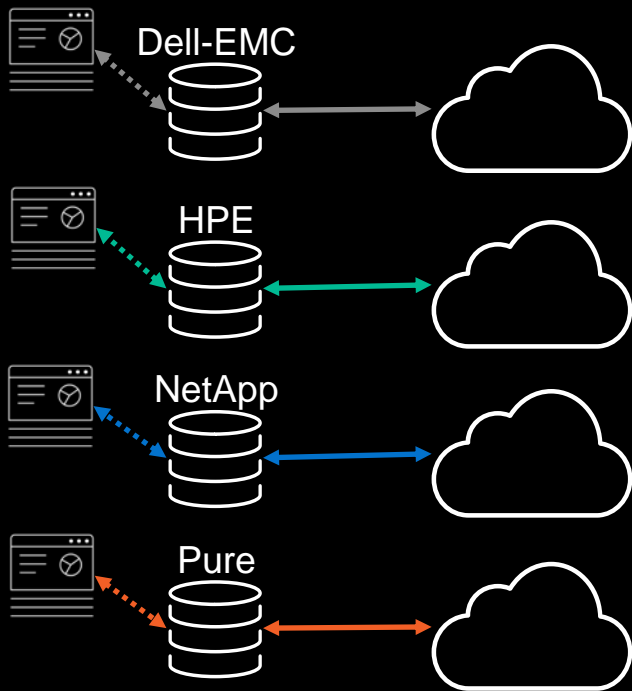

innovations adopted
on-premises and cloud

A software foundation

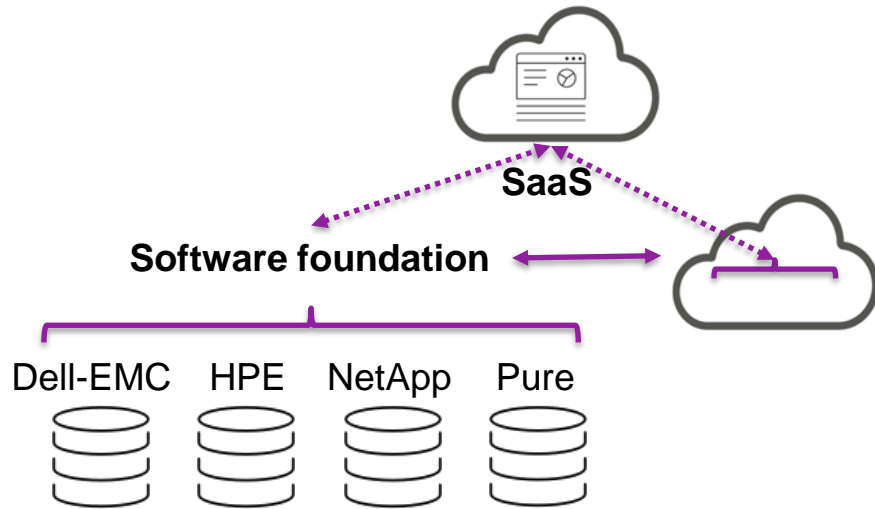

- Windows / VMware -> **Containers / Kubernetes**
- Move data between **on-premises and cloud**
- Data reduction across **on-premises and cloud**
- Data resilience across **on-premises and cloud**

Strength of a software foundation

Infrastructure tied to hardware

Open, portable software foundation

Storage choices matter because of cloud use cases

Business Continuity

leveraging rented
Public cloud
resources

DevOps Analytics

temporary data copy
from on-premises
to cloud

Data Resiliency

continuing to deliver
outcomes despite
cyber incidents

Workload Migration

permanent data
migration to cloud

Hybrid cloud

permanent state
of operating
infrastructure both
on-premises and
in Public cloud

Bring cloud economics on-premises

60%

enterprises will utilize flexible consumption-based IT by 2023

A variable OPEX pricing model is one reason that cloud is so attractive

IBM Storage for hybrid cloud

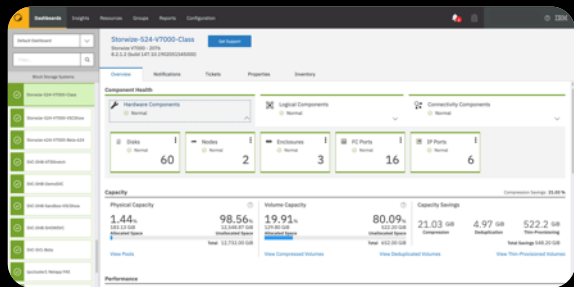

Storage Insights
Spectrum Virtualize

**One platform.
18 months.
Still accelerating!**

IBM Storage Insights

- The cloud service that monitors the performance, capacity and health of your infrastructure
- AI helps predict and prevent storage problems before they impact your business
- We automate aspects of the support process to enable faster resolution of issues

~23 million

telemetry data
points collected
daily from a
single device

3+ Exabytes

storage under
management

Agility

data movement
and AI-driven
tiering without
disruption among
storage systems

Bridge

from traditional
to new
technologies

Cloud

storage capabilities
that can be
deployed across
hybrid cloud

Data reduction (guaranteed)

reduction
up to 5:1

highest performance
2:1 with
IBM FlashCore

Encryption

encryption
regardless
of vendor

FIPS 140-2 with
IBM FlashCore

IBM Spectrum Virtualize immutable copy

Immutable copies

When you need a
copy that bad actors
can't reach

Built with
**IBM Spectrum
Virtualize**

Integrated with
**IBM Security
QRadar**

Cross-vendor support

Safeguarded Copy

Immutable point-in-time copies of production data

Isolated logical air-gap offline by design

Separate privileges for admins of production data
and Safeguarded Copies

Consistent automation with other copy services

Spectrum Virtualize for your choice in storage vendors
