Enable your Teams to do more!

Are you currently using Microsoft Teams?
Are you getting the full potential out of your
current deployment? Are you still using a
legacy on-premises telephony solution?

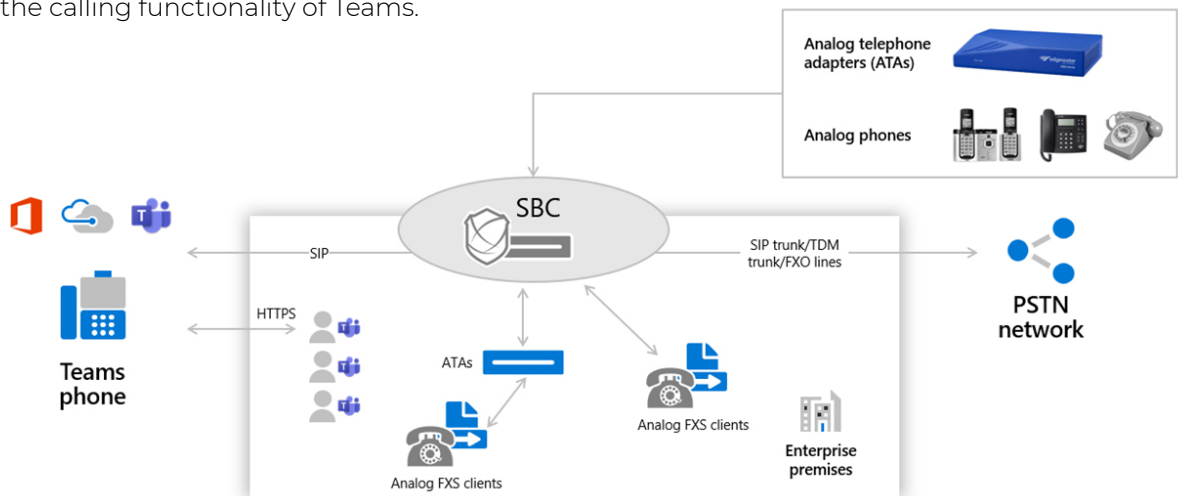

Did you know that over 80 million users leverage Microsoft Teams for their Enterprise calling solution? Logicalis can help get your full potential out of this great workstream collaboration platform! Are you looking to leverage Teams for your enterprise voice solution? Logicalis can help implement Teams Calling with PSTN connectivity. Reduce applications, reduce content switching between apps, and consolidate your entire collaboration experience to a single robust platform with Microsoft Teams.

The first step to trying Microsoft Teams Calling is a Proof of Concept. During this Proof of concept, Logicalis experts will assist with network quality testing, setting up PSTN Connectivity to Teams, handsets, and room systems to work with Teams calling. This will allow users to test drive the calling functionality of Teams.

Logicalis partners with the best of the Microsoft Technology landscape including, Audiocodes, Poly, Neat, and Yealink. This allows for flexibility to find the right device for your user community.

Logicalis has demonstrated we have the expertise for these migrations. Logicalis holds Advanced Specializations for Calling for Microsoft Teams, Teamwork Deployment, and Adoption and Change Management.

There is a device for every scenario and persona available for the Teams Platform. Logicalis can help determine the right device for end users and meetings spaces. This POC qualifies for Microsoft Funding to help offset the cost to deploying the Calling Proof of Concept.

Inquire with your Logicalis Account Executive to learn more about this offer!
