

Solution Brief

Gain a Competitive Edge with Secure AI and Automation

from IBM and Logicalis

Driving Change with AI and Automation

In today’s fast-moving, digital-first marketplace, the ability to adapt and operate efficiently is no longer optional. Organizations are under pressure to boost productivity, manage complex hybrid environments, and safeguard critical systems, all while reducing costs and staying competitive.

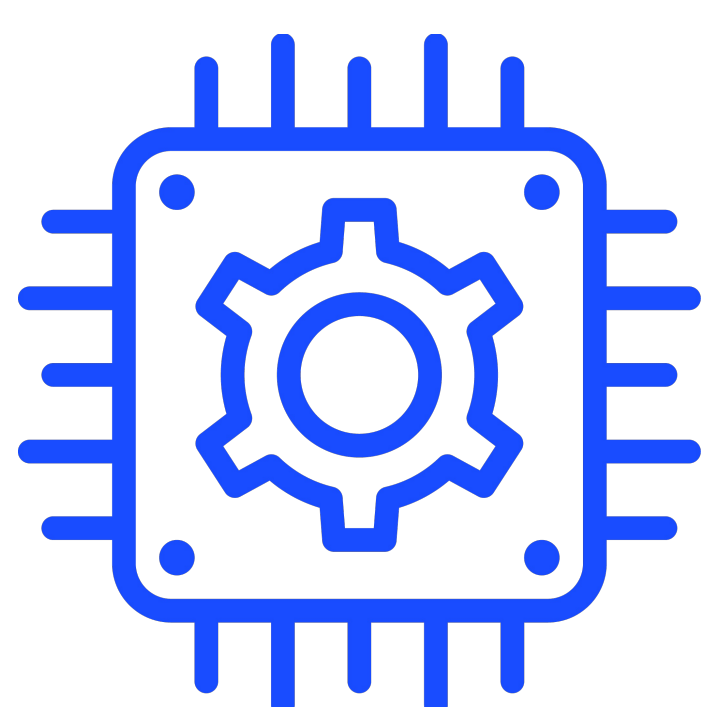

AI-powered automation offers a path forward.

By integrating AI, automation, and security into your enterprise architecture, you can streamline operations, accelerate innovation, and create a foundation for sustainable growth. Logicalis and IBM deliver the expertise, technology, and global capabilities to make it happen.

Transforming Productivity with IBM

IBM offers a comprehensive, industry-leading portfolio of AI and automation solutions that can become a catalyst for change.

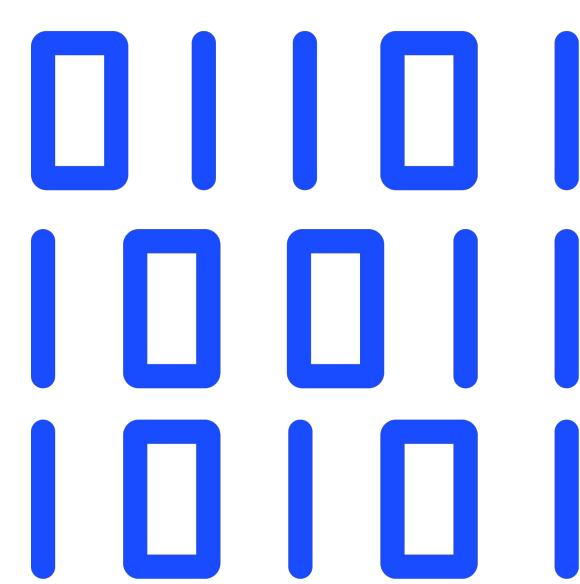

With AI assistants, intelligent automation, and secure integrations, organizations can connect systems, eliminate repetitive work, and accelerate decision-making. This reduces time- and budget-consuming manual tasks, while freeing teams to focus on higher-value activities. IBM's AI and automation portfolio - along with the right strategy and guidance - can unlock ROI, enhance resilience, and drive growth across your enterprise.

watsonx.ai

Turn ideas into reality with an enterprise-grade AI studio. Build and deploy AI services with tools, APIs, and models to integrate directly into your applications.

- Accelerate AI development with enterprise-ready models
- Integrate AI into hybrid and multi-cloud environments
- Deploy AI solutions with built-in trust and compliance

watsonx.data

A data store designed for AI, watsonx.data combines the speed of a warehouse with the flexibility of a lake to scale analytics across your business.

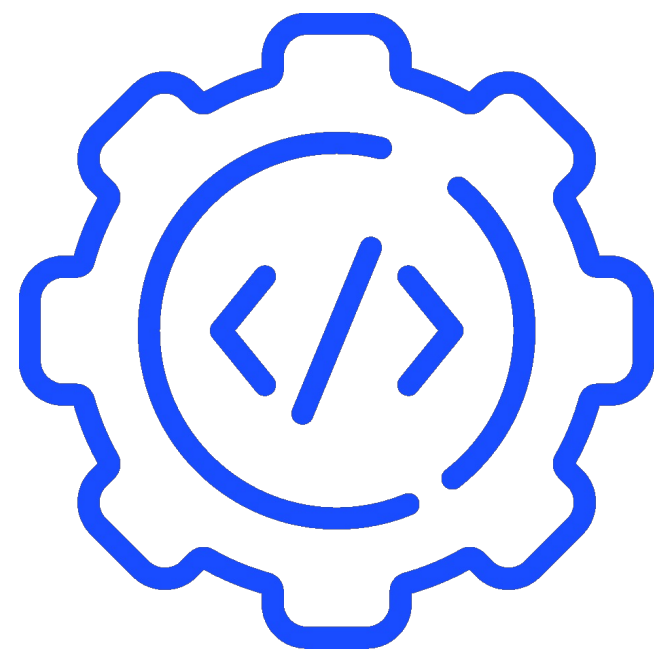

- Consolidate structured and unstructured data
- Enable AI training at scale
- Reduce data silos for faster insights

watsonx.governance

Direct, manage, and monitor your AI using a single toolkit to ensure responsible and transparent AI at scale.

- Monitor AI performance and compliance
- Establish explainability and auditability
- Reduce risk with lifecycle governance

watsonx Code Assistant

Accelerate code generation while maintaining trust, security, and compliance.

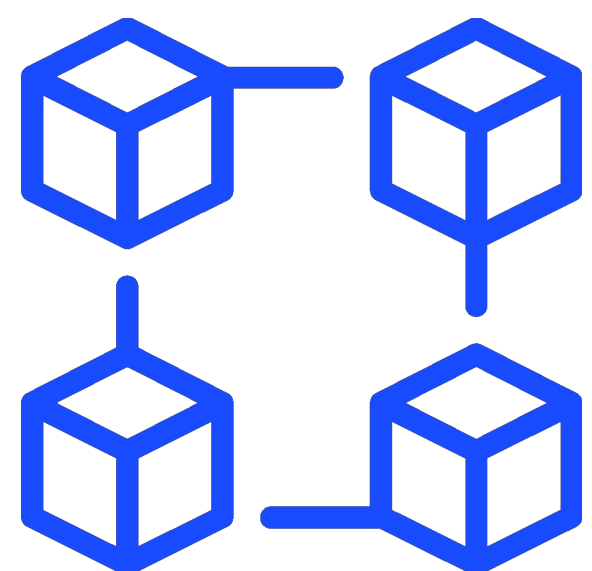

- Boost developer productivity with AI-assisted coding
- Maintain coding standards and best practices
- Shorten application delivery timelines

watsonx Orchestrate

Create AI assistants and agents that automate workflows, simplify complex tasks, and work across your existing systems. Build, run, and manage agents in minutes and connect them seamlessly with apps and tools you already use.

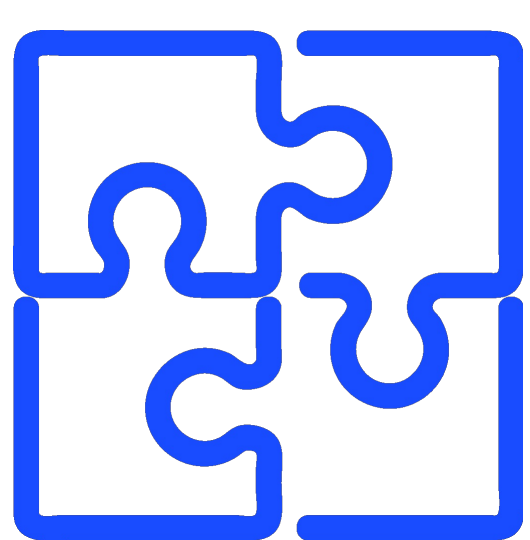

- Reduce manual work and accelerate decisions
- Optimize workflows across HR, sales, procurement, and more
- Scale efficiency with prebuilt and custom agents

IBM Granite

A family of performant, trusted AI models built for enterprise needs.

- Deploy domain-specific AI quickly
- Maintain security and privacy controls
- Drive innovation with adaptable, pre-trained models

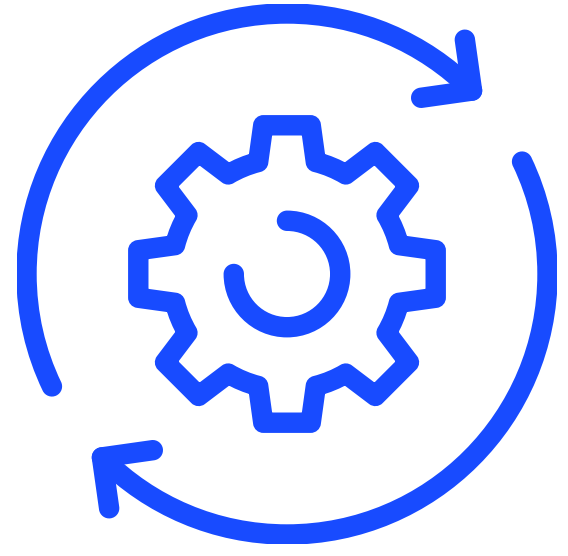

IBM Turbonomic

Optimize your IT infrastructure with intelligent automation that balances workloads in real time. Reduce cloud and data center costs while improving performance and reducing waste.

- Maximize efficiency across compute, storage, and networks
- Automate resource provisioning to prevent downtime
- Reduce costs, emissions, and over-provisioning

Mainframe AI and Automation

Maximize mainframe performance and efficiency with AI-driven tools and secure, resilient transaction processing.

- Accelerate application development and modernization with watsonx Code Assistant for z and Test Accelerator for z.
- Unlock and structure mainframe data for AI and analytics with Data Gate for watsonx and Db2 for z/OS.
- Enhance operational resilience and strengthen security with Concert for z/OS and zSecure.

Build Your Competitive Advantage

with Logicalis + IBM

Logicalis and IBM combine advanced software capabilities with deep implementation expertise to help you integrate AI, automation, and security into every layer of your enterprise. Together, we enable you to modernize processes, streamline operations, and create a foundation for lasting competitive advantage.

Our track record, global presence, and team of IBM-certified specialists mean you can move forward with confidence, knowing your initiatives are supported by Logicalis, IBM, and our commitment to your success.

The IBM team at Logicalis can help you:

- Deploy AI and automation across your enterprise with confidence
- Optimize operations to empower IT and drive innovation
- Embed security into every automated workflow

We begin by helping you evaluate your current technology environment and identifying opportunities for AI and automation integration. Our certified experts then design and implement tailored solutions that align with your business

Industry-Leading Security Portfolio

IBM software offers visibility, control, and compliance features that help safeguard sensitive data and systems, even in complex hybrid environments. As an industry leader across multiple disciplines, including security, IBM is an ideal choice to help protect your AI-driven operations.

- IBM QRadar Suite unifies threat detection, investigation, and automated response across hybrid environments
- IBM zSecure automates mainframe security administration, compliance checks, and threat detection
- IBM Guardium protects sensitive data with real-time monitoring, encryption, and policy enforcement

tailored solutions that align with your business goals, handling everything from initial deployment to change management support. Through our managed services, we provide ongoing optimization, monitoring, and support to ensure your IBM software investments deliver continuous value.

If you're ready to learn more about IBM's solutions, connect with a member of our team today.
