

Logicalis + HPE Alletra Storage

Simplicity Meets Speed

Cut the complexity. Fuel performance. Run any app, anywhere, without compromise.

Storage infrastructure should enable your business, not constrain IT teams with more complexity.

HPE Alletra Storage helps simplify storage infrastructure by bringing the cloud experience directly to your data center. With AI-driven automation, 99.9999% availability, and managed storage services from Logicalis, you can cut the complexity and focus on business outcomes, not storage management.

- ☒ **Always On:** Run applications confidently with 99.9999% uptime guarantee.
- ☒ **Always Fast:** Achieve sub-millisecond latency with millions of IOPS for your most demanding workloads.
- ☒ **Everywhere:** Extend the same cloud experience from edge to core to cloud with a single, unified platform.
- ☒ **For Every Workload:** Consolidate mission-critical, virtualized, file, and test/dev workloads in one intelligent system.

Cut the Complexity

Unified Multi-Protocol Support: Run any app without compromise from edge to cloud and access block, file, and object storage on a single platform.

As-a-Service Consumption: Shift from costly procurement to accessing it on-demand through HPE GreenLake and paying only for what you use.

Intent-Based Provisioning: Reduce operations time with rapid, automated provisioning. Select your storage tier, specify capacity, and let automation handle the rest.

Fuel Performance

Cloud-Native Architecture: Deploy with zero configuration right out of the box: rack, power on, connect, and let HPE GreenLake do the rest.

AI-Driven Predictive Intelligence: HPE InfoSight uses machine learning across millions of sensors worldwide to predict and prevent issues automatically, so you can stop firefighting and get more time back.

Disaggregated Scale-Out Design: Scale performance and capacity independently and grow storage with your business, without wasteful over-provisioning.

All-Flash Performance: Sub-millisecond latency, with over 2 million IOPS, keeps your mission-critical applications running reliably at peak performance.

Run Any App, Anywhere

Mission-Critical Applications: Guaranteed 99.9999% uptime ensures your business-critical databases, ERP systems, and core applications run without interruption. Eliminate the risk of downtime that costs your business revenue and reputation.

Hybrid Cloud Integration: Experience the same cloud-native simplicity from edge to core. Deploy applications consistently across on-premises and public cloud environments with unified management and seamless data mobility.

High-Performance Analytics & AI: Handle millions of IOPS with sub-millisecond latency for real-time analytics, machine learning workloads, and data-intensive processing. Scale performance independently as your AI initiatives grow from pilot to production.

Virtual & Container Environments: Effortless scaling for VMware, Hyper-V, and containerized workloads with predictive optimization that identifies issues between storage and VMs before they impact performance. Manage resources with AI-driven recommendations that improve availability and utilization.

General Purpose & Mixed Workloads: Cost-efficient, reliable hybrid storage adaptively designed for both primary production and secondary backup workloads. Get the performance you need without over-provisioning for peak demand.

Elevate Your Storage Experience

with Logicalis and HPE Alletra Storage

Stop fighting fires. Start accelerating business outcomes. Logicalis Managed HPE Alletra Storage delivers cloud-native simplicity, AI-driven intelligence, and guaranteed availability, fully managed by our team of certified experts.
